Tokenized Japanese Equity Fund "JX" Now Available on Hong Kong's HashKey Exchange

— Expanding Global Distribution Following DigiFT, Bringing Japanese Investment Products to Investors Worldwide —

SBI Global Asset Management Co., Ltd. (the "Company") hereby announces that "SBI Japan High Dividend Equity Strategy Token (JX)," a tokenized product of the "SBI Japan High Dividend Equity Fund" managed by SBI Asset Management Co., Ltd., a subsidiary of the Company, is now available through "HashKey Earn," the asset management service of "HashKey Exchange," a licensed digital asset exchange in Hong Kong.

On July 15, 2026, the Company announced, in collaboration with DigiFT Tech Pte. Ltd. ("DigiFT"), a Singapore-based capital and business alliance partner of the SBI Group, the world's first tokenization of a Japanese equity fund on a public blockchain. JX, which has been offered to qualified investors through DigiFT since July 14, is now also accessible through the HashKey Exchange sales channel, further expanding the Company's points of contact with overseas investors, starting with those in Hong Kong.

Qualified investors eligible on HashKey Exchange can subscribe for and redeem JX using the US dollar-denominated stablecoin "USDC." The investment strategy of JX is to select stocks from Japanese listed equities based on dividend levels, corporate earnings, financial soundness, stock valuations and other factors, aiming to achieve total returns through dividend income and medium- to long-term capital gains.

This launch is not merely tokenization on a single platform; it is an important step toward building a "new global sales and distribution model" that delivers Japanese investment products to the world through multiple digital financial platforms. By diversifying sales channels and expanding its overseas investor base, the Company will pursue opportunities to grow assets under management over the medium to long term.

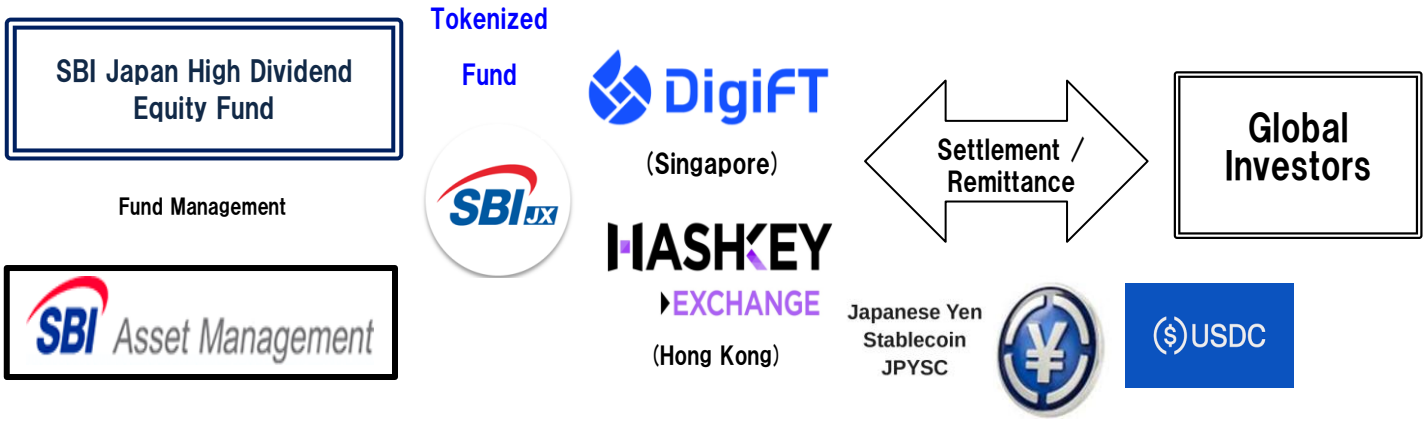

Going forward, in pursuit of the "Japan-originated on-chain capital market" promoted by the SBI Group, the Company will consider tokenizing a diverse range of investment products, including equities, bonds and MMFs, and expanding them overseas, with a view to linking with Japanese yen and US dollar stablecoins and DeFi. By fusing traditional asset management with digital finance, the Company aims to build next-generation financial infrastructure that delivers Japanese financial assets to investors around the world.

End
